Bengaluru, India

[LinkedIn](#) · [GitHub](#)

Full-stack engineer with 3 years of experience building web platforms on React, TypeScript, Node.js, and PostgreSQL. I've worked across the whole stack — building UIs, writing REST APIs, and setting up CI/CD infrastructure. Most of my work has been in banking and insurance SaaS products at Neutrinos, where I owned features from design to deployment.

Work Experience

Software Development Engineer II · [Neutrinos](#) · [Bengaluru](#)

Jul 2024 – Present

Three core services — full-stack: Built and maintained the UI and REST APIs for three services used by banking and insurance clients — an integration layer, a case manager, and an agent portal. These handled thousands of cases a month and I worked on them end to end, from the React frontend through to the Node.js API layer.

Cross-team ownership: Worked directly with client teams, product managers, and other developers across distributed teams. Took responsibility for requirement clarity, delivery timelines, and bug resolution without needing to escalate.

CI/CD and monitoring setup: Set up the Kubernetes-based staging environment and CI/CD pipeline from scratch using Docker and Azure DevOps. Also set up Grafana dashboards with automated alerting — reduced deployment time by 40% and MTTR by 50%.

Associate Product Engineer · [Neutrinos](#) · [Bengaluru](#)

May 2023 – Jul 2024

Internal quiz platform: Built a full-stack quiz app using Angular, Node.js, and MongoDB. It was used internally by 100+ employees and also shown to prospective clients as a demo of what Neutrinos Studio could build.

QR-code event app: Built a MEAN stack app for gift distribution at a company event — attendees scanned QR codes, gifts were tracked in real time, and the whole thing ran for 100+ participants. Cut admin work during the event by 60%.

Projects

Travel Story Map — Map-based platform for pinning and sharing travel stories

[Link](#)

[\[React\]](#) [\[TypeScript\]](#) [\[Tailwind CSS\]](#) [\[Node.js\]](#) [\[Express\]](#) [\[MongoDB\]](#) [\[Mapbox GL JS\]](#) [\[Cloudinary\]](#) [\[Vercel\]](#)

Users can click anywhere on a Mapbox map to drop a pin, write a story, and upload a photo — or search for a place by name. Other users can browse and read all stories on the map.

Images go through Cloudinary (upload → URL → stored in MongoDB). Used Mapbox Geocoding API for place search and fly-to animations between pins.

DepRadar — VS Code extension for npm dependency analysis

[Link](#)

[\[TypeScript\]](#) [\[VS Code Extension API\]](#) [\[Node.js\]](#) [\[npm audit\]](#) [\[ESBuild\]](#) [\[ESLint\]](#)

Published extension that scans a project's package.json and tells you which packages are unused, which are outdated (grouped by major/minor/patch), and what npm audit vulnerabilities exist (low to critical).

Includes an interactive dependency graph showing direct and transitive packages. One-click refresh reruns the full analysis without restarting VS Code.

Technical Skills

Frontend React 18, Next.js, TypeScript (strict), Tailwind CSS, shadcn/ui, Zustand, React Query (TanStack), Redux

Backend Node.js, Express.js, REST APIs, WebSockets, Microservices, Prisma ORM

Databases PostgreSQL, MongoDB, MySQL, Redis — query optimisation & schema design

DevOps Docker, Kubernetes (AKS), Azure DevOps, GitHub Actions, Grafana, CI/CD

Tools Git, Vite, Jest, Vitest, Postman, Agile/Scrum, Linear

Education

BCA

Calicut University, Kerala · 2018 – 2021

MERN Stack Development Program

Brototype, Kochi · Aug 2022 – May 2023
